Deploy Mobile Apps with Intune

Deploy Mobile Apps with Intune

When operating Bitwarden in a business setting, administrators may want to automate deployment of Bitwarden mobile apps to users with **Microsoft Intune**. This article will cover how to use Intune to deploy Bitwarden Password Manager mobile apps to your managed devices.

Bitwarden mobile apps should be deployed to managed devices on **Android** using the Google Play store or on iOS using the **Apple** App Store. Follow Microsoft's official documentation for instructions on how to do so:

- Android: See Microsoft's documentation here.

- iOS: See Microsoft's documentation here.
