uMatrix and NoScript access rules

By default, the uMatrix and NoScript extensions may block the Bitwarden Firefox extension from accessing the Bitwarden API servers. Without adding proper rules to whitelist the Bitwarden API servers, logging in and other API operations will fail.

uMatrix

The following [uMatrix rule](#) is required:

Bash

```
dc8ef5f6-eb0d-4c87-9e9f-0cf803f619e8.moz-extension-scheme bitwarden.com xhr allow
```

Note

The UUID included in the above rule (`dc8ef5f6-eb0d-4c87-9e9f-0cf803f619e8`) will be different for your installation. Use the [about:debugging#/runtime/this-firefox](#) page (navigate from Firefox's address bar) to locate your Bitwarden extension UUID.

NoScript

Whitelisting the following domain in NoScript is required: [bitwarden.com](#)
