How Bitwarden Brings Value to Your Business

Learn how Bitwarden can secure:

Business Services

- Information Technology
- Advertising & Marketing

Finance

Government

Healthcare

Insurance

Manufacturing

Media & Internet

Public Utilities

Software

Telecommunications

Transportation & Travel

Business Services

Information Technology

Needs: Password security, user management, easy administration, secure file/text transfer, automation

Bitwarden Solutions:

- Provide password security to your organization with powerful administration tools and simple user management.
- Integrate with existing SSO systems and directories, and utilize APIs for automations.
- Boost productivity by enabling users to securely share logins and other data with specifically-assigned teams or user groups.
- Securely transmit text and files with Bitwarden Send to anyone inside or outside the organization using end-to-end encryption.

Bitwarden is trusted in IT by...

the worldwide leader in enterprise open source solutions for IT professionals

a leading data storage and disaster recovery solutions provider

a multinational identity and access management software company

"Bitwarden is a solution to the enterprise-class headache. No more uncertainty and process approximation around password management."

Alberto Gaiga, CEO
Intesys

"To be able to not only provide our clients with a better user experience, but strengthen their password management and overall security – this is priceless for the GreenLoop team"

Stephen Moody, CTO
GreenLoop

Advertising & Marketing

Needs: Sharing logins for tools, securing contractors, secure file/text transfer

Bitwarden Solutions:

- Collaborate on important social media accounts with shared logins and integrated two-factor authentication.
- Add productivity by simplifying login with autofill and reducing failed logins and password resets.
- Provide account teams and contractors a way to access the services and tools they need, without compromising access control.
- Use the Bitwarden Send feature to securely transmit encrypted sensitive client information and deliverables.
