[Learn more about Bitwarden](#)

Bitwarden for you

Bitwarden empowers [you and your loved ones](#) to conveniently manage and protect all aspects of online life, including logins, identities, credit cards, notes, and TOTP codes. Backed by end-to-end AES 256-bit encryption, Bitwarden creates a secure vault with all entered fields fully encrypted and allows you to securely access unlimited passwords from anywhere, on any device. For additional layers of protection, vault health reports improve overall security and detect potential data breaches or weak passwords.

[Plans and pricing for you >](#)

Bitwarden for your business

Bitwarden enables [teams and enterprises](#) to easily facilitate secure password sharing among colleagues. Reduce cybersecurity risk by enacting strong password policies for all employees and monitor activity with audit logs. Bitwarden integrates seamlessly with your existing security stack and supports SSO and directory service integrations. Passwordless authentication, biometric unlock, security key support, and credential autofill makes it easy for employees to access their important accounts, ensuring productivity for your company.

FAQs

Are URLs encrypted in Bitwarden?

Yes, all URLs are encrypted within the Bitwarden vault and never shared with third-parties. For more information on the Bitwarden business model, please see the post [Defining and sustaining value for Bitwarden users](#).

What data is encrypted within my Bitwarden vault?

All vault data within each Bitwarden account is [end-to-end encrypted](#) with AES-CBC 256-bit encryption before being stored anywhere.

[Vault data](#) that is encrypted includes, but is not limited to:

- Names of folders, collections, items, & attachments
- All fields for all item types (logins, credit cards, identities, and secure notes)
- All custom field name/value combinations

What is administrative data?

Administrative data contains information connected to your Bitwarden account, including account creation, usage of the Bitwarden Service and support, and billing. Learn more about administrative data in this [help article](#).

What are the backup and retention policies at Bitwarden?

Bitwarden maintains automated backups for disaster recovery, which operate in accordance with the company's data retention policies. Bitwarden databases use data encryption and backups are encrypted at rest.

If a user were to [delete a Bitwarden account or organization](#), the account or organization in question would be permanently deleted, including all data associated with it. Learn more about how Bitwarden stores your data in this [help article](#).

Do I need a Premium account to share passwords?

You can share for free! Any account can create a free 2-person organization, where you can invite one other Bitwarden user to share passwords between you both. If you join a Family, Teams, or Enterprise organization, you are automatically upgraded to a premium account for free.

How do I upgrade to a Families subscription?

Easily upgrade your individual account to a Families plan by following the steps listed in this [help article](#).

How do I import my data into Bitwarden?

To import data into your individual Bitwarden vault from another password management solution or file, check out this [article](#) for instructions.

To import data directly into a Bitwarden organization from another password management solution or file, check out this [article](#) for instructions.

If you experience errors while importing data into an individual Bitwarden account or organization, reference this [help article](#) for troubleshooting.

You can always add vault data into an individual vault or organization by manually creating a vault item. Learn how to manage vault items in this [help article](#).

What is a Bitwarden organization?

An [organization](#) relates Bitwarden users and vault items of a particular entity (family, company, team, enterprise, or group of people). Members of an organization are granted access to an organization vault, where vault items including logins, identities, credit cards, and secure notes can be shared between users.

Bitwarden offers a variety of organizations to meet your business's or family's needs. For feature-by-feature breakdowns of each organization type, see the [About Bitwarden plans](#) help article.

How do I securely share vault items?

The primary method of sharing vault items in Bitwarden is via [collections](#). Collections are organization-equivalents to folders where vault items can be grouped together and securely shared. Learn how to use, create and manage collections in this [help article](#).

Can I host Bitwarden outside the cloud?

Yes, Bitwarden offers several options for self-hosting your password management. Find more information on self-hosting Bitwarden with these resources:

- [Help Center: Hosting FAQs](#)
- [Blog: Self-hosting Bitwarden on DigitalOcean](#)
- [Help Center: Install and Deploy - Linux](#)

How can I ensure the Bitwarden browser extension autofills my credentials?

Users should be aware that autofill on pageload is turned off by default. Visit this [help center article](#) to learn how to turn on this functionality. If you are still having issues autofilling credentials from the browser extension for a specific website, try setting up a [linked custom field](#) to force autofill. You should also disable your browser's built-in password manager to ensure autofilling with Bitwarden works as intended. Check out this [help article](#) for more information on using autofill on the Bitwarden browser extension.

How do I disable website icons in Bitwarden?

For privacy-minded individuals who may not want a Bitwarden vault to submit icon requests on their behalf, these requests can be disabled under settings. Learn more about disabling website icons for your Bitwarden account in this [helpful guide](#).

How does Bitwarden comply with security standards?

Bitwarden complies with GDPR, HIPAA, Data Privacy Framework (DPF), and CCPA [privacy standards](#) and conducts frequent [third-party security audits](#) by leading security firms, Cure53 and Insight Risk Consulting. Bitwarden is [SOC 2](#) compliant and the open source codebase is regularly reviewed and scrutinized by a globally engaged community. Learn more about Bitwarden security on our [compliance page](#).
